ABOUT ME

Backend and AI developer experienced in building applications using Java, Spring Boot, React, and Python. Hands-on experience with REST APIs, RAG systems, LLM integration, graph databases, and Docker. Open-source contributor through GirlScript Summer of Code (GSSoC), with an interest in building scalable backend systems and AI-powered applications.

Core Skills

- P**rogramming Languages -**
  JAVA ,Python, SQL
- **Frameworks**
  Spring Boot, React, FastAPI, REST APIs
- **Tools & Platforms**
  Git, GitHub, Docker ,Postman ,AWS
- **AI & Machine Learning**
  RAG, LangGraph, OpenAI, Groq, Amazon Bedrock

PROJECTS

NextStep AI : AI Career Coach Platform

https://github.com/shrutisharma-sh/nextstep-ai.git

Technologies: Spring Boot, FastAPI, LangGraph, PostgreSQL, Docker

- Architected a full-stack AI career platform orchestrating 5 chained LangGraph agents for resume analysis, skill-gap detection, and roadmap generation.
- Integrated Spring Boot with FastAPI to create a microservice-based backend and AI service architecture.
- Integrated Groq LLM inference, Tavily real-time search, and FAISS-based RAG for grounded career guidance.
- Added Langfuse tracing for monitoring latency, cost, and hallucination risk.
- Implemented JWT authentication, PostgreSQL persistence with JSONB, and Dockerized services; tested backend and AI services end-to-end using Postman.

BankMate : Voice-First Banking Kiosk

https://github.com/shrutisharma-sh/BankMate.git

https://production.d1h59oid9vou66.amplifyapp.com/

Technologies: React, AWS Lambda, S3, API Gateway, Amazon Bedrock, Amazon Textract, AWS Amplify

- Built a voice- and camera-driven banking kiosk prototype enabling elderly and low-digital-literacy users to complete banking tasks without reading or writing.
- Designed a serverless AWS backend using Lambda, S3, and API Gateway for passbook processing and banking workflows.
- Integrated Amazon Textract for passbook data extraction and Amazon Bedrock for AI-powered processing.
- Implemented Hindi and English voice interaction and deployed the frontend using AWS Amplify.

LedgerLens - Graph Powered Investigation Agent

https://github.com/shrutisharma-sh/LedgerLense

Technologies: Python, FalkorDB, Cypher, Groq API, Streamlit, Docker

- Built an AI-powered agent to investigate financial risk signals in housing society records.
- Developed Cypher queries for multi-hop relationship analysis, suspicious transfers, and governance irregularities.
- Integrated Groq LLM to generate evidence-based investigation summaries.
- Built a Streamlit interface to display findings and trace supporting graph queries.

EXPERIENCE

Open Source Contributor - GirlScript Summer of Code (GSSoC)

https://gssoc.girlscript.org/profile/53b2f9b8-b8c1-49d5-9e63-29dcdfde527f

May 2026 – September 2026

- Contributed to open-source projects through feature development, bug fixes, and code improvements.
- Collaboration with developers using Git, GitHub workflows, and pull requests.
- Gaining experience working with real-world codebases and collaborative development practices.

EDUCATION

G.B Pant University of Agriculture and Technology , Pantnagar
Industrial and Production Engineerng
CGPA - 7.4
2024-2028
